

## Sustainability Policy Statement

RoslinCT's vision is to lead the field in cell and gene therapy manufacturing and to be the global partner of choice. Building success on expert knowledge and aiming for progressive partnerships with the drive to deliver life-changing cell-based products.

We strive to integrate sustainability into everything we do. We aim to deliver our vision by providing superior development and manufacturing services, providing good governance, climate positivity, social well-being, and equity.

The United Nations Sustainable Development Goals (UN SDGs) provide a universal blueprint for developing our sustainability strategy and our investment partner GHO Capital is a signatory to the United Nations Global Compact. These frameworks have guided this set of over-arching policy commitments.

RoslinCT will:

- Positively contribute to the UN Sustainable Development Goals
- Work in partnership with GHO Capital to incorporate the UN Global Compact's Ten Principles into company strategy, policy, and procedures.
- Provide affordable and accessible healthcare solutions while positively impacting society and the environment.
- Engage and educate our employees on sustainability, building a culture of sustainability and integrating sustainable practices into our day-to-day operations.
- Provide thought leadership and knowledge share across our networks on the intersection between climate change and global health.
- Provide clear accountability by establishing governance and reporting lines through our Board of Directors

As we build up our approach to sustainability, we will establish clear goals, targets and KPIs, working collaboratively across our value chain and with key industry partners to deliver sustainable global healthcare solutions.
